DETAILED ACTION

Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Drawings

Figures 1-8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "said diode laser pumping source" in line 7. There is insufficient antecedent basis for this limitation in the claim. Applicant should either refer to "a diode laser from said laser diode pumping source" or simply to "said laser diode array".

Claim 6 depends on claim 6. It should depend on claim 5.

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-8 are rejected under 35 U.S.C. 102(a) as being anticipated by Wang et al. (US 6,101,199).

~~Regarding claim 1, Wang discloses an optical fiber comprising a core doped with active~~
species, an inner cladding surrounding the core, an outer cladding surrounding the inner cladding, where the shape of the inner cladding is an asymmetric symmetry broken polygon that inherently destabilizes local modes within said inner cladding, and where at least one boundary of the inner cladding is arc-shaped.

Regarding claim 2, there is further a laser diode array and a coupling system disposed between the optical fiber and the laser diode array for focusing the beam from the laser diode array into an aperture of the fiber.

Regarding claims 3-6, the inner cladding is a symmetry broken multiple-imaging rectangular cladding with an arc-shaped boundary.

Regarding claims 7-8, the gain application may be an optical amplifier with means coupling a signal into the fiber, or a fiber laser with reflectors on each side.
